

Agile Delivery Model - Scrum Practice

Before we start on exploring and defining the cadence for this project, we took some of the core aspects of Agile methodology as our pillars for defining our execution model for this project. Which are

Flexibility - The scope of work may change accordingly to new requirements

Work Breakdown - Sprints are small cycles of the project

Value of team work - Team work closely together and have a clear vision and responsibilities.

Iterative improvements - Frequent reassessment of the work done within a cycle to make the final product better.

Customer Engagement - Customer is closely engaged in the development and can change the requirements or accept the team's suggestions.

Scrum Teams - To deliver this project, the approach is to have three scrum teams

Scrum Team

| - Discovery Team

| - Adoption Team 1 - Bangalore

| - Adoption Team 2 - Pune
