# Jira Configuring workflows

To best configure JIRA for Agile Projects; we recommend addressing the following topics.
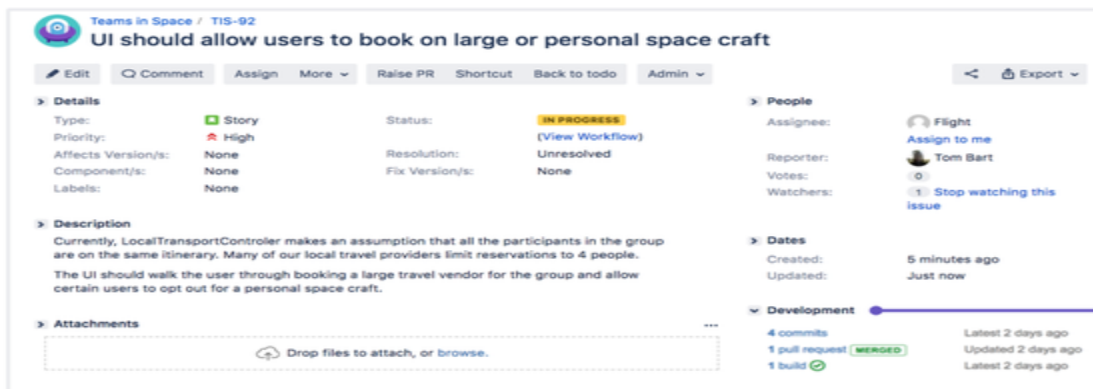

Configuration of Workflows –

Workflows are a set of statuses and transitions that an issue goes through during its lifecycle. We can create and edit workflows with ease, which fits your team's needs.

For Advance Steps refer Jira Documentation - {+}https://confluence.atlassian.com/jirasoftwareserver080/workflows-967899581.html+

Customizing Development Panel –

Development tools, such as repository managers, code review tools, and build and deployment orchestrators can be integrated with Jira to help you keep your project tracking in sync with engineering activities part of development work.

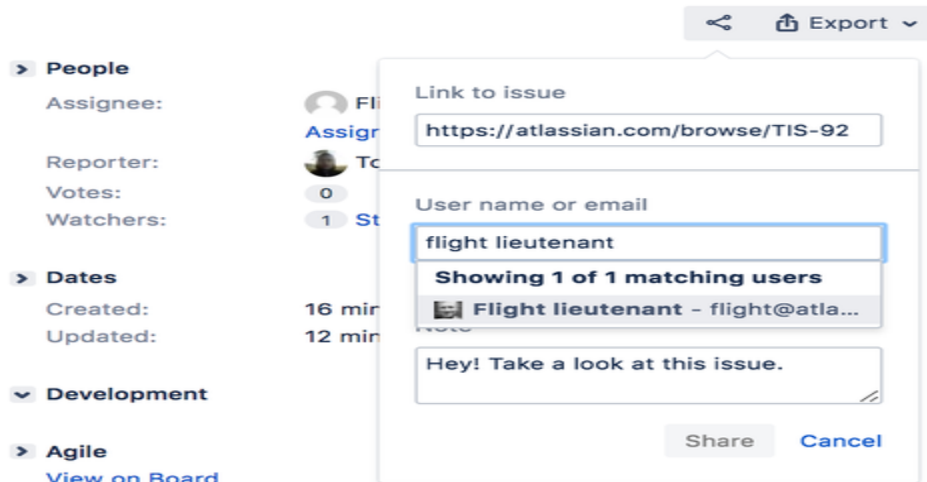

Refer the link for advance workflow integration with Bitbucket events: {+}https://confluence.atlassian.com/bitbucketserver064/jira-integration-974389028.html+
Refer the link for integration with collaboration tools:
Confluence Integration to create and link confluence pages to your sprints and epics, which makes it easy to share information about the sprint with your team. https://confluence.atlassian.com/adminjiraserver080/integrating-with-collaboration-tools-967896987.html

Setting up Notifications –

Jira Notification is used to communicate or track the issue to Jira Users through email channel either by sharing them the issue with them or by mentioning them in an issue's description and comments field.

Refer the link for more Notification configuration and schema setup.

Using Custom cards –

With customized issue cards for your boards, you can bring the right information to your team's attention at a glance. Card colors are changed based on particular issue type, priority, assignee, or any JQL that you want to highlight.

Refer here for more information on custom cards – {+}https://confluence.atlassian.com/jirasoftwareserver080/customizing-cards-967899129.html+

Project Wallboards –

Setting up a Project Wallboards to monitor vital data about the progress of your project. You can share information with your team during stand-ups using wallboards. Add gadgets to display the status of a sprint, which can be added to your wallboards, which includes issue status, time remaining, and build status.

Refer here for more information on setting up your wallboards.
