DevOps Assessment Stage 2

Stage	Process Interview Understanding and Documentation	Expected Output
2	Second level discussion with partner / client resources to validate understanding of their current processes, their role responsibilities, challenges with current setup, and 3 items for wish list they would like to see changed. As part of effort - generate a value stream mapping of existing model. Gather documentation and plans for in-progress/planned activities that can alter the current delivery framework / foundational services.	Define the current state (executive diagram) along with a write up summary and potential target state diagram. Work with stakeholders on confirming understanding of current state and articulate reasoning behind desired state. Desired state - should include how it will drive the desired change of shifting left and becoming more dev-centric in delivery model.
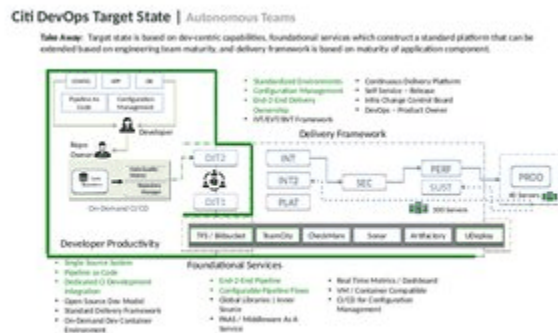

Task	Engagement Partner	Session Details	Engagement Output
Delivery Management	Program Manager		
	Product Owner		
	Release Manager		
Development	Developer		
	Dev Manager		
	Architect		
Test Engineering	Tester		
	Test Manager		
Tools Team	Build Engineer		
	Release Engineer		
	DevOps Developer		
	Systems Engineer
